1. MAIN FEATURES

*This picture may not be exactly the same as real object.

- Tags supported: Mifare 1k, Mifare 4k, Mifare UltraLight, Mifare UltraLight C, NTAG203, DESFire, DESFire EV1 and Mifare Plus 2K/4K
- Built-in antenna
- 0 to 400 KHz bit-wide I²C-bus communication
- 2.7 ~ 3.6V VDC operating, I/O pins are 5V tolerant
- Work current less than 45mA @3.3V
- Power down current less than 10uA
- Operating distance: Up to 50mm, depending on tag
- Storage temperature: -40 °C ~ +85 °C
- Operating temperature: -25 °C ~ +55 °C
- Dimension: 38 × 38 × 3 mm
- The OUT pin at low level indicates tag in detective range, and high level indicating tag out
- Auto-detection: LED is on when card is in the detection range¹
- Support IAP firmware update

¹ Supports all cards above except ISO14443-4 cards like DESFire/DESFire EV1 and MifarePlus L0/L2/L3. There is Auto-detection command to control its on/off.

2. PINNING INFORMATION

Unit: mil
 100 mil between two pads

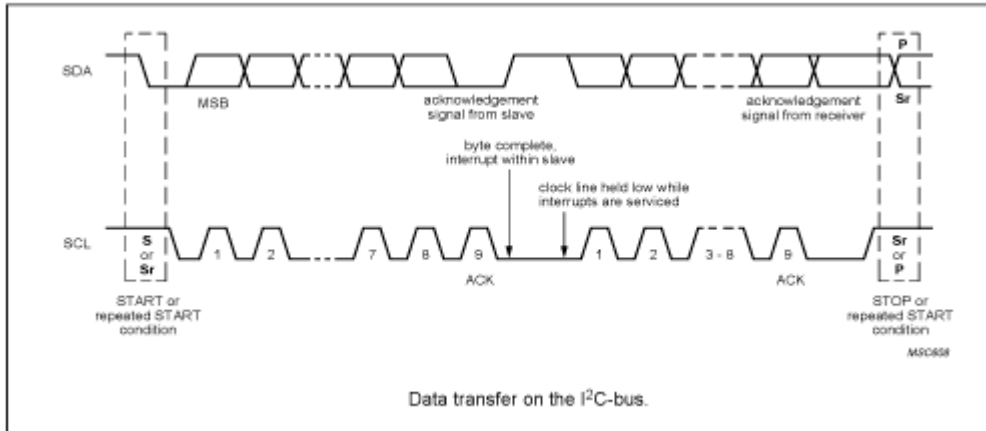

| PIN | SYMBOL | TYPE | DESCRIPTION |
|-----|--------|--------------|---|
| 1 | VDD | PWR | Power supply, 2.7V to 3.6VDC |
| 2 | IN | Input | Falling edge wake up SL030 from power down mode |
| 3 | SDA | Input/Output | Serial Data Line |
| 4 | SLC | Input | Serial Clock Line |
| 5 | Out | Output | Tag auto-detection signal low level indicating tag in high level indicating tag out |
| 6 | GND | PWR | Ground |
| 7 | NC | | |
| 8 | NC | | |
| 9 | NC | | |
| 10 | NC | | |

Attention: Pin IN must be connected HIGH voltage when working, so SL030 can enter power down mode properly.

3. Device Operation

3-1. Clock and Data Transitions:

The SDA pin is normally pulled high with an external device. Data on the SDA pin may change only during SCL low time periods. Data changes during SCL high periods will indicate a start or stop condition as defined below.

3-2. Start Condition

A high-to-low transition of SDA with SCL high is a start condition which must precede any other command

3-3. Stop Condition

A low-to-high transition of SDA with SCL high is a stop condition.

3-4. Acknowledge

All addresses and data words are serially transmitted to and from the SL030 in 8-bit words. The SL030 sends a zero to acknowledge that it is not busy, and has received each word. This happens during the ninth clock cycle.

3-5. Busy State

When the SL030 has received command, then don't acknowledge IIC bus until ends with the card communication.

3-6. Device Addressing

The SL030 devices require an 8-bit device address word following a start condition to enable the chip for a read or write operation.

The device address word consists of 7 bits addressing and 1 bit operation select bit.

The first 7 bits are the SL030 addressing, is 10100xx depend on JP1 and JP2 status as below table

| | JP1 | JP2 | Address |
|---------|-----|-----|------------------------|
| shorted | no | no | 1010000 (default) |
| | no | yes | 1010001 |
| | yes | no | 1010010 |
| | yes | yes | 1010011 |

The eighth bit of the device address is the read/write operation select bit. A read operation is initiated if this bit is high and a write operation is initiated if this bit is low.

The first byte after the START procedure.

3-7. Write Operations

The host device send a command(refer chapter 4) to SL030 via write operation, then SL030 will carry out the order that receive. Finished time according to different order

3-8. Read Operations

The host device passes to read the operation gets the order carries out the result

4. COMMAND DESCRIPTION

4-1. FORMAT

Host Write Command to SL030:

| Address | Len | Command | Data |
|---------|-----|---------|------|
|---------|-----|---------|------|

- Address: 1 byte, 0xA0
- Len: 1 byte indicating the number of bytes from Command to the end of Data
- Command: 1 byte Command code, see Table 3
- Data: Variable length depends on the command type

Host Read The Result:

| Address | Len | Command | Status | Data |
|---------|-----|---------|--------|------|
|---------|-----|---------|--------|------|

- Address: 1 byte, 0xA1
- Len: 1 byte indicating the number of bytes from Command to the end of Data
- Command: 1 byte Command code, see Table 3
- Status: 1 byte Command status, see Table 4
- Data: Variable length depends on the command type.

4-2. Command Overview

Table 3

| Command | Description |
|-------------|---|
| 0x01 | Select Mifare card |
| 0x02 | Login to a sector |
| 0x03 | Read a data block |
| 0x04 | Write a data block |
| 0x05 | Read a value block |
| 0x06 | Initialize a value block |
| 0x07 | Write master key (key A) |
| 0x08 | Increment value |
| 0x09 | Decrement value |
| 0x0A | Copy value |
| 0x10 | Read a data page (Ultralight & NATG203) |
| 0x11 | Write a data page (Ultralight & NTAG203) |
| 0x12 | Download Key |
| 0x13 | Login sector via stored Key |
| 0x20 | Request for Answer to Select (ISO14443-4) |
| 0x21 | Exchange Transparent Data according to T = CL |
| 0x40 | LED control |
| 0x50 | Go to Power Down mode |
| 0x80 | MFP WritePerso |
| 0x81 | MFP CommitPerso |
| 0xF0 | Get firmware version |
| 0xFE | Turn on/off Auto-detection |

STATUS OVERVIEW**Table 4**

| Status | Description |
|--------|----------------------------|
| 0x00 | Operation succeed |
| 0x01 | No tag |
| 0x02 | Login succeed |
| 0x03 | Login fail |
| 0x04 | Read fail |
| 0x05 | Write fail |
| 0x06 | Unable to read after write |
| 0x08 | Address overflow |
| 0x09 | Download Key fail |
| 0x0A | Collision occur |
| 0x0C | Load key fail |
| 0x0D | Not authenticate |
| 0x0E | Not a value block |
| 0x0F | Input len invalid |
| 0x12 | MFP WritePerso fail |
| 0x13 | MFP CommitPerso fail |
| 0xF1 | Invalid command |

4-3. COMMAND LIST

4-3-1. Select Mifare card

Host Write:

| | |
|-----|------|
| Len | 0x01 |
|-----|------|

Host Read:

| | | | | |
|-----|------|--------|-----|------|
| Len | 0x01 | Status | UID | Type |
|-----|------|--------|-----|------|

Status: 0x00: Operation succeed

0x01: No tag

UID: The uniquely serial number of Mifare card

Type:

| | |
|--|------|
| MFMini_4B | 0x01 |
| MFMini_7B | 0x02 |
| MF1K_4B UID/ MFPLUS2K SL1_4B UID | 0x03 |
| MF1K_7B UID/ MFPLUS2K SL1_7B UID | 0x04 |
| MF4K_4B UID/ MFPLUS4K SL1_4B UID | 0x05 |
| MF4K_7B UID/ MFPLUS4K SL1_7B UID | 0x06 |
| MF Ultralight/MF Ultralight C/Ntag 203 | 0x07 |
| MF DESFire/MF DESFire EV1 | 0x09 |
| MF PROX | 0x0B |
| MFPLUS2K SL2_4B UID | 0x21 |
| MFPLUS4K SL2_4B UID | 0x22 |
| MFPLUS2K SL2_7B UID | 0x23 |
| MFPLUS4K SL2_7B UID | 0x24 |
| MFPLUS2K SL0/SL3_4B UID ² | 0x31 |
| MFPLUS4K SL0/SL3_4B UID | 0x32 |
| MFPLUS2K SL0/SL3_7B UID | 0x33 |
| MFPLUS4K SL0/SL3_7B UID | 0x34 |
| Other | 0x00 |

4-3-2. Login to a sector

Host Write:

| | | | | |
|-----|------|--------|------|-----|
| Len | 0x02 | Sector | Type | Key |
|-----|------|--------|------|-----|

Sector: Sector need to login, 0x00 – 0x27

Type: Key type (0xAA: authenticate with KeyA, 0xBB: authenticate with KeyB)

Key: Authenticate key, 6 bytes

Host Read:

| | | |
|-----|------|--------|
| Len | 0x02 | Status |
|-----|------|--------|

Status: 0x02: Login succeed

0x01: No tag

0x03: Login fail

0x08: Address overflow

4-3-3. Download Key into SL030

² Mifare Plus SL0 and SL3 can tell differences via ATS(ISO14443-4). Before ATS, they have the same ATQA and SAK(ISO14443-3). SL030 judges card type only via ISO14443-3 layer for the compatibility.

Host Write:

| | | | | |
|-----|------|--------|------|-----|
| Len | 0x12 | Sector | Type | Key |
|-----|------|--------|------|-----|

Sector: 0x00 – 0x27

Type: Key type (0xAA: KeyA, 0xBB: KeyB)

Key: 6 bytes, stored into SL030

Host Read:

| | | |
|-----|------|--------|
| Len | 0x12 | Status |
|-----|------|--------|

Status: 0x00: Operation succeed

0x08: Address overflow

0x09: Download fail

Note: Some delay is needed between Host Write and Host Read.

4-3-4. Login sector via stored key**Host Write:**

| | | | |
|-----|------|--------|------|
| Len | 0x13 | Sector | Type |
|-----|------|--------|------|

Sector: Sector need to login, 0x00 – 0x27

Type: Key type (0xAA: KeyA, 0xBB: KeyB)

Host Read:

| | | |
|-----|------|--------|
| Len | 0x13 | Status |
|-----|------|--------|

Status: 0x02: Login succeed

0x03: Login fail

0x08: Address overflow

4-3-5. Read a data block**Host Write:**

| | | |
|-----|------|-------|
| Len | 0x03 | Block |
|-----|------|-------|

Block: The absolute address of block to be read, 1 byte

Host Read:

| | | | |
|-----|------|--------|------|
| Len | 0x03 | Status | Data |
|-----|------|--------|------|

Status: 0x00: Operation succeed

0x01: No tag

0x04: Read fail

0x0D: Not authenticate

Data: Block data returned if operation succeeds, 16 bytes.

4-3-6. Write a data block**Host Write:**

| | | | |
|-----|------|-------|------|
| Len | 0x04 | Block | Data |
|-----|------|-------|------|

Block: The absolute address of block to be written, 1 byte.

Data: The data to write, 16 bytes.

Host Read:

| | | | |
|-----|------|--------|------|
| Len | 0x04 | Status | Data |
|-----|------|--------|------|

Status: 0x00: Operation succeed

0x01: No tag
 0x05: Write fail
 0x06: Unable to read after write
 0x0D: Not authenticate

Data: Block data written if operation succeeds, 16 bytes.

4-3-7. Read a value block

Host Write:

| | | |
|-----|------|-------|
| Len | 0x05 | Block |
|-----|------|-------|

Block: The absolute address of block to be read, 1 byte.

Host Read:

| | | | |
|-----|------|--------|-------|
| Len | 0x05 | Status | Value |
|-----|------|--------|-------|

Status: 0x00: Operation succeed
 0x01: No tag
 0x04: Read fail
 0x0D: Not authenticate
 0x0E: Not a value block

Value: Value returned if the operation succeeds, 4 bytes.

4-3-8. Initialize a value block

Host Write:

| | | | |
|-----|------|-------|-------|
| Len | 0x06 | Block | Value |
|-----|------|-------|-------|

Block: The absolute address of block to be initialized, 1 byte.

Value: The value to be written, 4 bytes.

Host Read:

| | | | |
|-----|------|--------|-------|
| Len | 0x06 | Status | Value |
|-----|------|--------|-------|

Status: 0x00: Operation succeed
 0x01: No tag
 0x05: Write fail
 0x06: Unable to read after write
 0x0D: Not authenticate

Value: Value written if the operation succeeds, 4 bytes.

4-3-9. Write master key (KeyA)

Host Write:

| | | | |
|-----|------|--------|-----|
| Len | 0x07 | Sector | Key |
|-----|------|--------|-----|

Sector: The sector number to be written, 0x00 – 0x27.

Key: Authentication key, 6 bytes

Host Read:

| | | | |
|-----|------|--------|-----|
| Len | 0x07 | Status | Key |
|-----|------|--------|-----|

Status: 0x00: Operation succeed
 0x01: No tag
 0x05: Write fail

0x08: Address overflow

0x0D: Not authenticate

Key: Authentication key written if the operation succeeds, 6 bytes.

Attention: Be sure KeyB is readable, otherwise KeyB will be change to 000000000000 after this command.

4-3-10. Increment value

Host Write:

| | | | |
|-----|------|-------|-------|
| Len | 0x08 | Block | Value |
|-----|------|-------|-------|

Block: The absolute address of block to be increased, 1 byte.

Value: The value to be increased by, 4 bytes.

Host Read:

| | | | |
|-----|------|--------|-------|
| Len | 0x08 | Status | Value |
|-----|------|--------|-------|

Status: 0x00: Operation succeed

0x01: No tag

0x05: Write fail

0x06: Unable to read after write

0x0D: Not authenticate

0x0E: Not a value block

Value: The value after increment if the operation succeeds, 4 bytes

4-3-11. Decrement value

Host Write:

| | | | |
|-----|------|-------|-------|
| Len | 0x09 | Block | Value |
|-----|------|-------|-------|

Block: The absolute address of block to be decreased, 1 byte

Value: The value to be decreased by, 4 bytes

Host Read:

| | | | |
|-----|------|--------|-------|
| Len | 0x09 | Status | Value |
|-----|------|--------|-------|

Status: 0x00: Operation succeed

0x01: No tag

0x05: Write fail

0x06: Unable to read after write

0x0D: Not authenticate

0x0E: Not a value block

Value: The value after decrement if the operation succeeds, 4 bytes

4-3-12. Copy value

Host Write:

| | | | |
|-----|------|--------|-------------|
| Len | 0x0A | Source | Destination |
|-----|------|--------|-------------|

Source: The source block copy from, 1 byte

Destination: The destination copy to, 1 byte

The source and destination must in the same sector

Host Read:

| | | | |
|-----|------|--------|-------|
| Len | 0x0A | Status | Value |
|-----|------|--------|-------|

Status: 0x00: Operation succeed
 0x01: No tag
 0x05: Write fail
 0x06: Unable to read after write
 0x0D: Not authenticate
 0x0E: Not a value block (Source)
 Value: The value after copy if the operation succeeds, 4 bytes

4-3-13. Read a data page (UltraLight & NTAG203)

Host Write:

| | | |
|-----|------|------|
| Len | 0x10 | Page |
|-----|------|------|

Page: The page number to be read, 1 byte

Host Read:

| | | | |
|-----|------|--------|------|
| Len | 0x10 | Status | Data |
|-----|------|--------|------|

Status: 0x00: Operation succeed
 0x01: No tag
 0x04: Read fail
 0x08: Address overflow
 Data: Block data returned if operation succeeds, 4 bytes.

4-3-14. Write a data Page (UltraLight & NTAG203)

Host Write:

| | | | |
|-----|------|------|------|
| Len | 0x11 | Page | Data |
|-----|------|------|------|

Page: The page number to be written, 1 byte.
 Data: The data to write, 4 bytes.

Host Read:

| | | | |
|-----|------|--------|------|
| Len | 0x11 | Status | Data |
|-----|------|--------|------|

Status: 0x00: Operation succeed
 0x01: No tag
 0x05: Write fail
 0x06: Unable to read after write
 0x08: Address overflow
 Data: page data written if operation succeeds, 4 bytes.

4-3-15. Request for Answer to Select (ISO14443-4)

| | |
|-----|------|
| Len | 0x20 |
|-----|------|

Response:

| | | | |
|-----|------|--------|-----|
| Len | 0x20 | Status | ATS |
|-----|------|--------|-----|

Status: 0x00: Operation succeed
 0x10: Address overflow
 ATS: According to ISO14443-4 protocol
 $Len + T_0 + TA_1 + TB_1 + TC_1 + A_1 + A_K$

4-3-16. Exchange Transparent Data (T = CL)

| | | |
|-----|------|------|
| Len | 0x21 | Data |
|-----|------|------|

Data: COS command

Response:

| | | | |
|-----|------|--------|------|
| Len | 0x21 | Status | Data |
|-----|------|--------|------|

Status: 0x00: Operation succeed

0x11: Communicate with card failed

Data: Response data from card

4-3-17. LED Control**Host Write:**

| | | |
|-----|------|------|
| Len | 0x40 | Data |
|-----|------|------|

Data: 0x00: LED off

0x01: LED on

Host Read:

| | | |
|-----|------|--------|
| Len | 0x40 | Status |
|-----|------|--------|

Status: 0x00: Operation succeed

4-3-18. Power Down**Host Write:**

| | |
|-----|------|
| Len | 0x50 |
|-----|------|

Host Read:

| | | |
|-----|------|--------|
| Len | 0x50 | Status |
|-----|------|--------|

Status: 0x00: Operation succeed

Note: Some delay is needed when waking up SL030.

4-3-19. Write Perso**Host Write:**

| | | | |
|-----|------|-----|------|
| Len | 0x80 | Bnr | Data |
|-----|------|-----|------|

Bnr: 2Byte Block or Key Address to be written, MSB first.

For example,

Master Key Address is 0x9000, and write it as 0xFFFF..FF(16Bytes)

13809000FFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFh

Configuration Key Address is 0x9001, and write it as 0xFFFF..FF(16Bytes)

13809001FFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFh

Switch to Level 2 Key Address is 0x9002, and write it as 0xFFFF..FF(16Bytes)

13809002FFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFh

Switch to Level 3 Key Address is 0x9003, and write it as 0xFFFF..FF(16Bytes)

13809003FFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFh

Data: Value of the key or data

Host Read:

| | | |
|-----|------|--------|
| Len | 0x80 | Status |
|-----|------|--------|

Status: 0x00: Operation succeed

0x11: Communicate with card failed

0x12: Card Write Perso failed

4-3-20. Commit Perso**Host Write:**

| | |
|-----|------|
| Len | 0x81 |
|-----|------|

This command commit the Write Perso and switch the card to security level 1(SL1 card) or level 3(SL3 card).

Host Read:

| | | |
|-----|------|--------|
| Len | 0x81 | Status |
|-----|------|--------|

Status: 0x00: Operation succeed
 0x11: Communicate with card failed
 0x13: Card Commit Perso failed

Attention: According to NXP MifarePlus card document, Commit Perso will make effect after you have “Write Perso” the Master KEY, Configuration KEY and SWL3 KEY.

If your card is L1 card, after Commit Perso, the card will switch L0 to L1;

If your card is L3 card, after Commit Perso, the card will switch L0 to L3.

4-3-21. Get firmware version**Host Write:**

| | |
|-----|------|
| Len | 0xF0 |
|-----|------|

Host Read:

| | | | |
|-----|------|--------|------|
| Len | 0xF0 | Status | Data |
|-----|------|--------|------|

Status: 0x00: Operation succeed
 Data: firmware version.

4-3-22. Turn on/off Auto-detection**Host Write:**

| | | |
|-----|------|------|
| Len | 0xFE | Data |
|-----|------|------|

Data: 0x00: Turn off Auto-detection
 0x01: Turn on Auto-detection

For example,

02FE00h // Turn off Auto-detection

02FE01h // Turn on Auto-detection

Host Read:

| | | |
|-----|------|--------|
| Len | 0xFE | Status |
|-----|------|--------|

Status: 0x00: Operation succeed

5. DIFFERENCES FROM PREVIOUS VERSION

Although we make efforts on the compatibility between the new SL030 V3.0 and the old SL030 V1.0-V2.3, there are still some differences you need to know.

1. New SL030 has a new auto-detection function which can close automatically when there is a DESFire or MifarePlus L0/L2/L3 card coming into the detection range, and the light will be on even if the card is out of field. By the way, we also offer you the Turn On/Off Auto-detection command.
2. New SL030 supports nearly all cards of NXP Mifare series now and we rebuilt the card type characters.(Details see to Command Select Mifare Card Description)
